

**Biscom Delivery Server (BDS) was built from the ground up to be a superior enterprise-class file transfer solution, one explicitly designed for today's more demanding file delivery needs.** The increase in people sharing data and files, combined with size and security limitations of email and FTP, has forced organizations to seek solutions for sending large and confidential files while complying with a multitude of compliance and regulatory requirements. BDS ensures secure, authenticated, file transfers with complete tracking of all transactions. With its extensive reporting and auditing capabilities, simple user interface, and robust encryption and security technologies, Biscom Delivery Server helps organizations meet their most challenging file transfer needs.

## Applications for Secure File Delivery

**Health Care** — Protect against unintended or unauthorized dissemination of Protected Health Information (PHI). Safely send medical records, lab reports, insurance claims, and patient information.

**Finance** — Control access to and distribution of sensitive financial data such as monthly statements, agreements, income statements, accounting databases, and investing activity.

**Legal** — Share documents relating to litigation support, attorney-client communications, and contracts and agreements.

**Corporate/HR** — Manage the transfer of confidential information regarding employees with 401K and pension plans, health insurance, and payroll services.

**Software Distribution** — Manage initial delivery and regular updates of software, automatically expire access.

**Construction/Engineering** — Exchange large files such as CAD drawings, blueprints, and contracts. Automatic file restart ensures delivery even with slow or intermittent network connectivity.

**Real Estate** — Collaborate on loan applications, financial approvals, purchase agreements, deeds, and closing documents.

## Features

- End-to-end security with encryption for data "in transit" and "at rest" using NIST-approved AES 256-bit encryption.
- Simple user interface is geared for quick ad-hoc file transfers.
- No file size limits.
- Powerful administrative tools for user management, system configuration, application customization, and multi-locale support.
- Integration with Active Directory and LDAP for user authentication and management.
- Real-time system activity monitoring, IP address tracking, and user activity and system utilization reports.
- Microsoft Outlook support.
- Compliance role for auditors.
- Java, .NET, and Web services APIs with support for scripting and high-level languages.
- Automatic checkpoint restart on network failure.
- VMware appliance and subscription-based Cloud offering available.

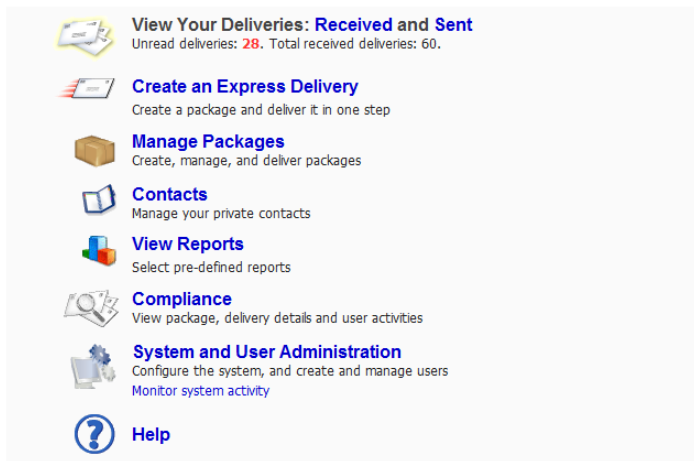

Feature	BDS	Email	FTP	Overnight
Secure	Yes	No	No	No
Large file support	Yes	No	Yes	No
Easy-to-Use	Yes	Yes	No	No

Secure reply	Yes	No	No	No
Return receipt	Yes	No	No	Yes
Recipient notification	Yes	Yes	No	Yes
Recall message	Yes	No	Yes	No
APIs for integration	Yes	No	No	No
Checkpoint restart	Yes	No	No	No

# Biscom Delivery Server

## Secure File Transfer

Securely Deliver and Access Files

## Automate, Track, and Manage Deliveries

Secure file transfer with BDS solves the security and reliability concerns of email and FTP. Easy to use, BDS provides a secure delivery system that can be used by anyone in the organization without IT support or intervention. Users can use a Web interface or email add-in to quickly send files. An email notification is delivered to the recipient who must provide the proper credentials in order to access files. When a recipient downloads a file, an email is sent back to the sender with notification that the file was delivered successfully.

## Cloud and VMware Support

BDS can be deployed as a VMware appliance and run in multiple virtual environments, either on-premise or in a cloud. BDS in the cloud is a Software as a Service (SaaS) offering that offers full secure file transfer functionality but on a subscription basis.

## Compliance

BDS guarantees the confidentiality of your file delivery and also provides a detailed audit trail. Guaranteeing confidentiality and maintaining an audit trail are central to regulations such as HIPAA and Sarbanes-Oxley, data privacy laws, as well as other federal and state mandated compliance requirements. A compliance

## Benefits

- Share any size file securely with no unauthorized access.
- Greater reliability than email, easier to use than FTP – more secure and auditable than both.
- Help users with compliance requirements.
- Manage and track all file transfers.
- Scalable for high traffic volumes.
- Low TCO, fast ROI.

role built into BDS provides auditors with comprehensive reports detailing who's sending files and to whom.

## Automation

Automation tools provide scheduled and real-time file transfers. Users or server applications can drop files into designated folders, and BDS will automatically package the files up and deliver them. BDS can also automatically retrieve files from designated folders for batch processing.

## Customization and Software Development Kits

BDS provides easy modification of the user interface, including logos, content, and features. Java, .NET, and Web services SDKs enable developers to tailor the application to their specific requirements, integrate with existing customer databases and applications, and enable companies to build a truly customized delivery application on a proven platform.

## About Biscom Delivery Server

Founded in 1986, Biscom has provided many of the world's largest companies with enterprise communications solutions, including applications for enterprise fax management, secure document delivery, file conversion, SharePoint solutions, enhanced messaging, and workflow solutions.
